

N-Pro network installation

- Install the software on all computers (laptops) you are going to use in the network configuration.
- Create one shared directory on a NAS or on a laptop. (You can also use a cloud device such as Onedrive or Google Drive for this purpose)
- Go to the setup screen of the software and enter the path to the shared drive in the data field. You can also do this with the schematics path when you want them to be shared for all computers) Do this with all the computers that you are going to use. (see example below)

The screenshot shows the 'Setup' dialog box with the 'Data' tab selected. The 'Location data' section contains two text boxes: 'Tournament data' with the path '\\nas-n-pro\karate\kumite' and 'Match schematics' with the path '\\nas-n-pro\karate\schematics'. Below this is the 'Language' section with a 'Set' button, a dropdown menu set to 'English', and an 'Edit' button. The 'Sound' section has two rows: 'End of match' with the path 'C:\Program Files (x86)\N-Pro Tournament Karate\end of match.w' and 'Warning' with the path 'C:\Program Files (x86)\N-Pro Tournament Karate\warning.wav'. The 'XML data' section has a 'Location XML data' text box and four checkboxes: 'Create time XML data', 'Create category XML data', 'Create scoreboard XML data (score based)', and 'Create scoreboard XML data (timer based)'. At the bottom, there are 'Remove' buttons for 'Match data', 'Contenders', 'Categories', and 'Backups', and a 'Recovery' button for 'Restore contenders'. A green 'Save' button and a grey 'Close' button are at the very bottom.

All computers share now the same data and schematics directory located on a NAS or shared network drive. Create or copy all data on this shared folder. Copy all schematics you are going to use to the shared schematics folder.

The software has been programmed to work optimal with this setup. The software will collect automatic all data from all tatamis for time management, podium places and all other match data.

Time management will automatic correct the end times when "Use live time correction" is enabled"
